

# Placing your camera and seat

If you are left handed, please imagine that drawings 1 and 2 are mirrored, and substitute “right” for “left” in the explanations that follow.

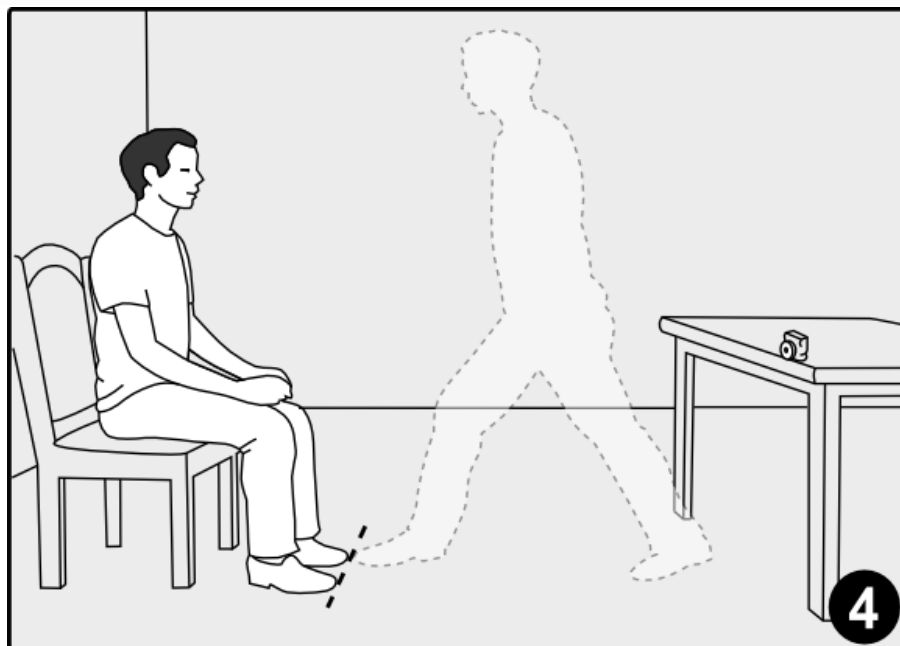

1. Place the camera on the very edge of a standard height desk or dinner table (roughly 72cm or 29 inches), so that the lamp overhangs the table.

2. Stand against the edge of the table, facing away from it, with your arms at your sides so that the camera is roughly 20cm (7 inches) to the left of your left hand.

3. Take one big step forward, roughly 1.2m (4 feet) from heel to foot tip. You can also take three small steps, placing your feet at the end of each other.

4. Place your seat directly in front of you, facing the table, so that when you are sitting, the tips of your feet are where the tip of your front foot was after the big step.

At this point, please turn the lamp on using the small black switch located where the cable meets the lamp. As regards the lamp, please refer to the safety warning leaflet: we advise that you wear sunglasses when drumming with Airdrums.

Please place your computer screen away from the camera. If you don't, the lamp will dazzle you when you look at the screen because it will be in your direct line of sight.

The picture below illustrates good and bad locations for your computer screen:
